## 1 Notice

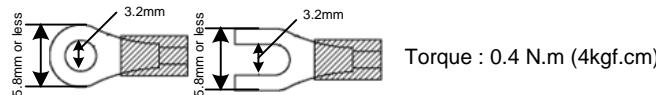

Please confirm the specification of controllers is to totally with your requirement before using it, also read this user's manual in detail.

### ⚠ Danger

1. Danger! Electric Shock!  
DON'T touch AC power wiring terminal when controller has been powered!  
Keep the power off until all of the wiring are completed!

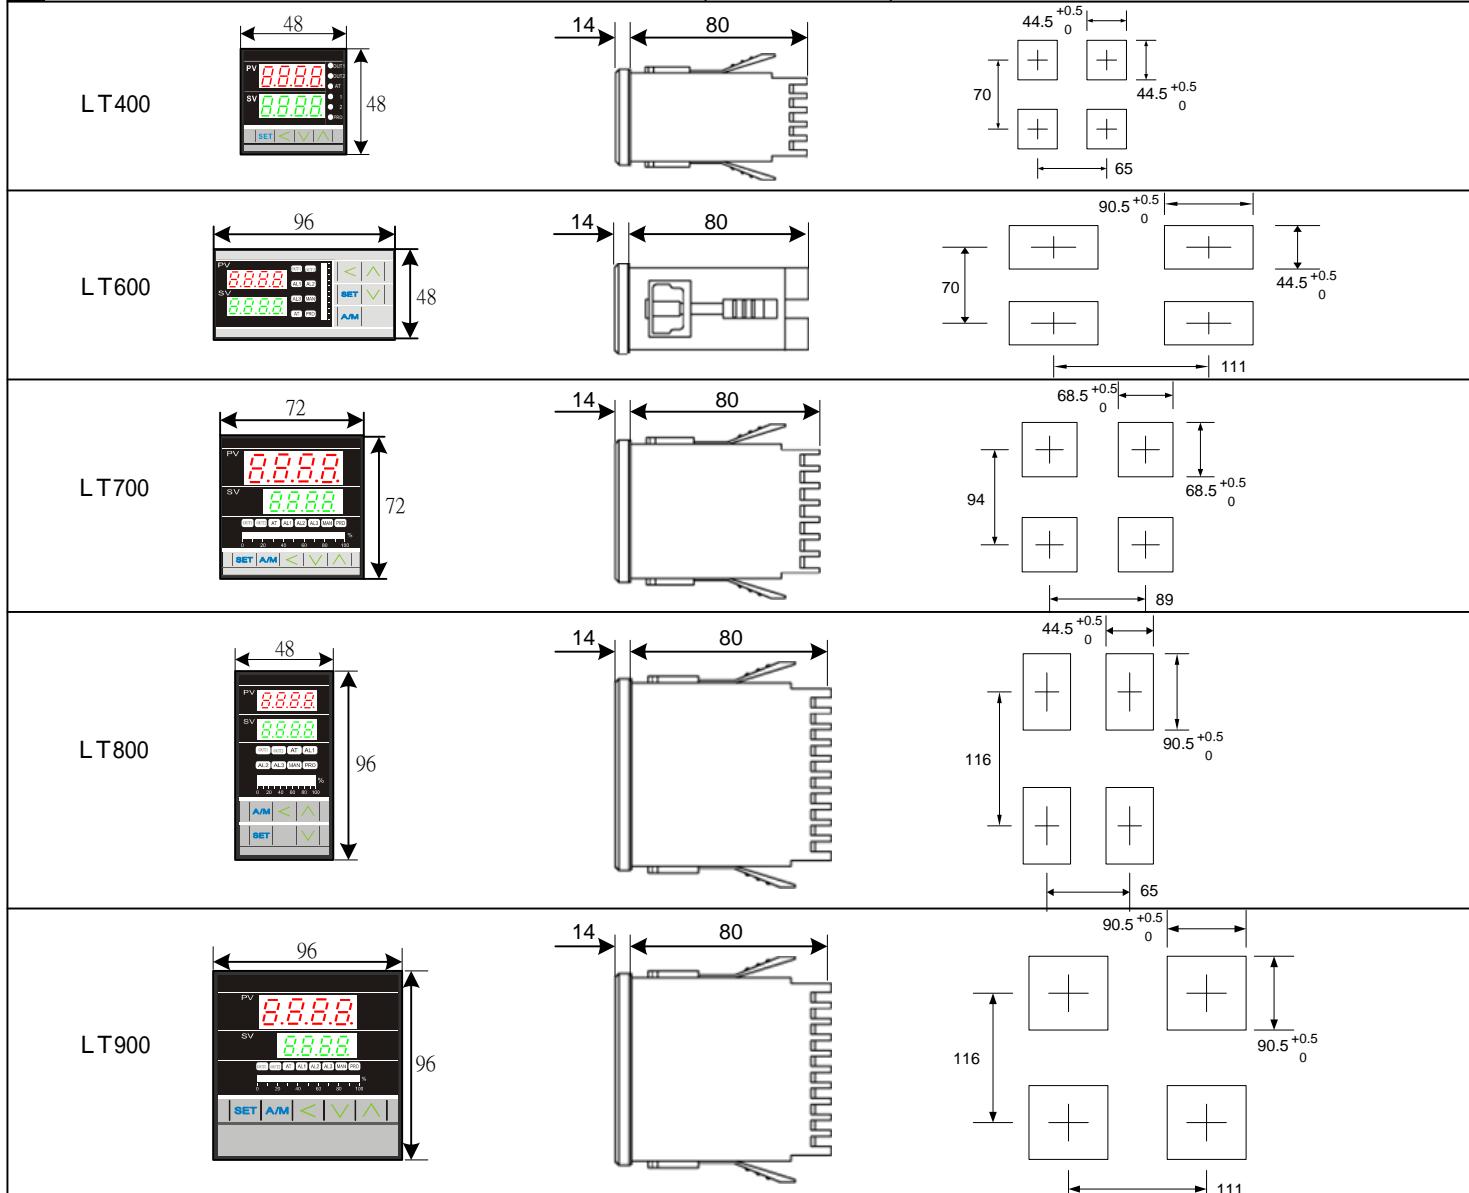

### ⚠ Warning

1. Please confirm the AC power wiring to controller is correct, otherwise it would be caused aggravated damage on controller. (LT400 connecting with Pin 1 and 6, LT600/700/800/900 with Pin 1 and 2).
2. Be sure to use the rated power supply(AC85~265V or DC24V), otherwise it would be caused aggravated damage on controller.
3. Please confirm wires are connected with correct terminal (Input, Output).
4. Use M3 screw-compatible crimp-on terminals with an insulation sleeve, as shown below

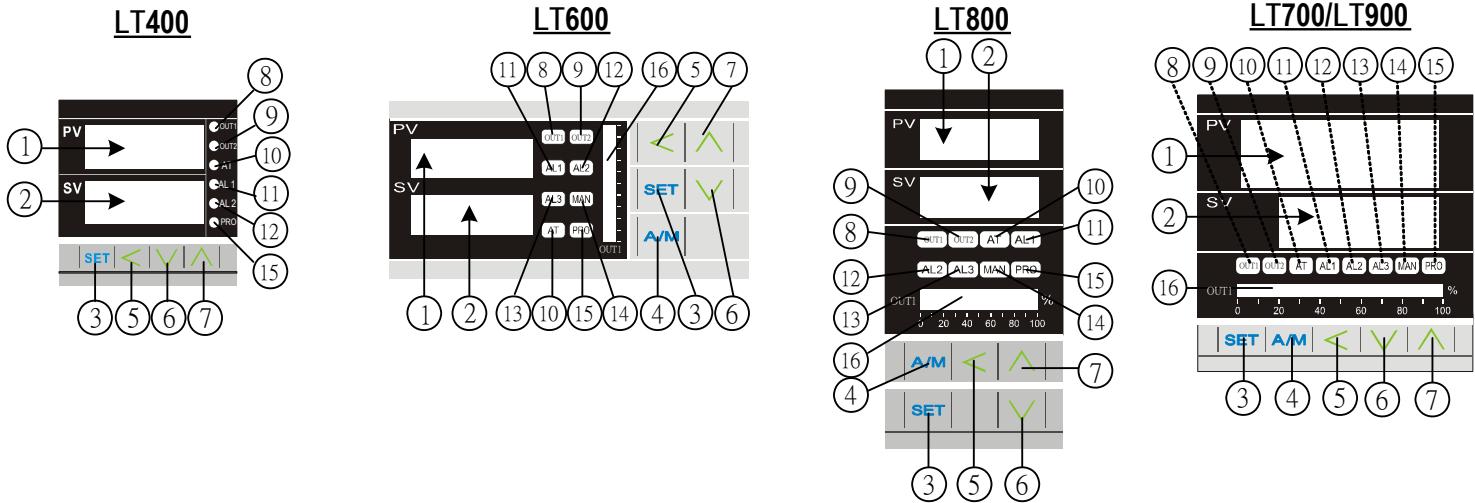

5. Avoid to install controller in following spaces :
  - I. A place where the ambient temperature may reach beyond the range from 0 to 50°C
  - II. A place where the ambient humidity may reach beyond the range from 50 to 85% RH.
  - III. A place where the controller likely to come into contact with water ,oil , chemicals ,steam and vapor.
  - IV. A place where the controller is subject to interface with static electricity ,magnetism and noise.
6. For thermocouple(TC) input ,use shield compensating lead wire.
7. For RTD input ,use shield wires which have low resistance and no resistance difference between the 3 wires.
